

PRISMA 2020 Checklist (Adapted for Systematic Review / Evidence Map)

Manuscript: Can Ageing Be Slowed or Reversed? (mjdrdypu_451_26) — Revision R1 **Date:** 23 June 2026

This checklist maps the manuscript to the PRISMA 2020 items, adapted for a reproducible evidence map that does not perform quantitative pooling. Where an item is reported in part, the scope of reporting is stated plainly.

Section	Item	Checklist item	Reported	Location	Notes
Title	1	Identify as a systematic review / evidence map	Yes	Title; Article type	Stated as “evidence map”
Abstract	2	Structured abstract	Yes	Abstract	Background, Objective, Methods, Results, Conclusion
Introduction	3	Rationale	Yes	Introduction	Claim-separation rationale stated
Introduction	4	Objectives	Yes	Introduction	Five distinct evidentiary claims defined
Methods	5	Protocol and registration	Yes (declared)	Methods; Limitations	Not prospectively registered; disclosed as a limitation
Methods	6	Eligibility criteria	Yes	Methods	Intervention-class and human-evidence criteria described
Methods	7	Information sources	Yes	Methods	PubMed, Europe PMC, Crossref
Methods	8	Search strategy	Yes	Supplementary Table S2	Full query strings; retrieval limit 35/query/source stated
Methods	9	Selection process	Yes	Methods	Rule-based title/abstract screening described

Section	Item	Checklist item	Reported	Location	Notes
Methods	10	Data collection process	Yes	Methods	Metadata-assisted extraction described
Methods	11	Data items	Yes	Methods; Supp. Tables	Intervention, outcome, model system, effect text
Methods	12	Risk of bias	Yes	Methods; Table 3; Supp. Table S6	Structured appraisal following RoB 2 / ROBINS-I signalling logic
Methods	13	Effect measures	N/A	Methods	Effect estimates extracted descriptively; no pooling
Methods	14	Synthesis methods	Yes	Methods	Narrative synthesis + transparent credibility scoring; pooling rationale given
Methods	15	Reporting bias assessment	Partial	Discussion; Figure 3	Promotional-language burden mapped as a transparency proxy
Methods	16	Certainty assessment	Partial	Results	Credibility scoring used as a transparency tool; formal GRADE not performed
Results	17	Study selection (flow)	Yes	Figure 1	Connected flow with full screening breakdown

Section	Item	Checklist item	Reported	Location	Notes
Results	18	Study characteristics	Yes	Table 2	Representative priority human records characterised
Results	19	Risk of bias in studies	Yes	Table 3; Supp. Table S6	Domain-level appraisal for priority records
Results	20	Results of individual studies	Yes	Table 2	Effect estimates extracted where available in accessible text
Results	21	Results of syntheses	Yes	Table 1; Figures 2–4	Credibility ranking, promotional-language map, translational readiness
Results	22	Reporting biases	Yes	Figure 3	Credibility-versus-promotional-language map
Results	23	Certainty of evidence	Partial	Results; Discussion	Transparency scoring; formal GRADE not performed
Discussion	24	Interpretation	Yes	Discussion	Conservative; healthspan vs age-reversal separation
Discussion	25	Limitations	Yes	Strengths & Limitations	Search scope, single-reviewer screening, no meta-analysis, no registration
Discussion	26	Conclusions	Yes	Conclusion	Cautious evidence hierarchy
Other	27	Competing interests	Yes	Declarations	None declared

Section	Item	Checklist item	Reported	Location	Notes
Other	28	Funding	Yes	Declarations	None declared
Other	29	Role of funders	N/A	Declarations	No external funding

Summary: All core PRISMA 2020 items are addressed. Three items are reported in part by design — formal GRADE certainty rating (items 16, 23) and protocol registration (item 5) were not undertaken; each is disclosed explicitly in the manuscript Limitations. The work is presented as a reproducible evidence map rather than a pooled meta-analysis, and the synthesis method is described accordingly.
